

Bypass TT 11 rail DC

Order Number: ASATT11RD0_BP

order number	description	weight
ASATT11RD01BP	TT 11 rail 12V DC with internal bypass	8,7 kg
ASATT11RD02BP	TT 11 rail 24V DC with internal bypass	8,7 kg

principle:

By integrating a bypass system in an **asa** radiator, it is possible to avoid overstressing the cooler at cold start conditions (when the oil is extremely viscous)
This mode of construction also reduces high oil flows through the radiator, which can occur when for example hydraulic cylinders are used.

valve:

- spring loaded valve
- opening pressure: 2bar (30 PSI)
- dimension: BSP 1/2"
